Munin Centos 6.0

Gezien ik errors had met guides op het internet, hier mijn recentste codelijnen die werken:

As root execute:

```
{codecitation style="brush: bash;"}  
perl -MCPAN -e shell
```

```
{/codecitation}
```

The first time you run this you are interviewed about various things.

Answer the questions, you can probably answer blank on any you do not

understand.

You will then be presented with a CPAN prompt (cpan>) . From this

prompt you type:

```
{codecitation style="brush: bash;"}  
  
cpan> install Time::HiRes
```

```
{/codecitation}
```

You could also do it one at a time like this:

```
{codecitation style="brush: bash;"}  
  
# perl -MCPAN -e 'install Time::HiRes'
```

```
yum install cpan -y
```

```
rpm -Uvh http://download.fedoraproject.org/pub/epel/6/x86_64/epel-release-6-6.noarch.rpm
```

```
um install -y munin munin-node
```

```
{/codecitation}
```

```
/etc/munin/munin.conf:
```

```
dbdir /var/lib/munin htmldir /var/www/html/web/munin logdir /var/log/munin rundir  
/var/run/munin # a simple host tree [enter.yourservernamehere] address 127.0.0.1  
use_node_name yes
```

```
{codecitation style="brush: bash;"}  
chown munin:munin /var/www/html/web/  
munin
```

Munin Centos 6.0

Geschreven door Administrator
